

# PEARLTAINER

YOUR ULTIMATE CONTAINER SOLUTION

## Shipping Containers, Reefer Units & Modular Solutions

### SHIPPING CONTAINER SUPPLIER IN DUBAI, UAE

Looking for shipping containers for sale or rent in Dubai, Sharjah or elsewhere in the UAE? Pearlainer FZE provides container and modular-unit solutions for commercial, industrial, construction, storage and logistics requirements. Explore new and used marine shipping containers, refrigerated containers, offshore and industrial containers, modular offices, toilet cabins and chiller containers.

Whether you need a container for cargo transport, additional storage, a temporary workspace or a specialised project, share your specifications with our team. We can review your requirements, discuss suitable options and provide a quotation subject to equipment availability, condition, location and service scope.

# Shipping Containers for Sale and Rental

Find container options for cargo movement, storage, industrial operations and temporary project requirements. New and used units may be considered according to the requested specification and current availability. Rental enquiries can be assessed according to the container type, quantity, location and required period.

## STANDARD SHIPPING CONTAINERS

Standard shipping containers are widely used for transporting general cargo and creating secure storage space. Common sizes include 20-foot and 40-foot units. Suitability depends on the cargo dimensions, payload requirements, container condition and intended application.

Whether you need a container for a warehouse, business premises, industrial facility or transport operation, provide your preferred size, quantity and destination so the available options can be reviewed.

## HIGH-CUBE SHIPPING CONTAINERS

High-cube containers offer additional internal height compared with standard-height containers of the same nominal length. They can be useful for cargo with greater height requirements and for selected storage or conversion applications.

Confirm the external dimensions, internal clearance and door opening before selecting a unit.

## NEW AND USED MARINE CONTAINERS

Choose between new and used container options according to your budget, operating requirements and intended use. The condition and suitability of a used container can vary from unit to unit. Ask for the specific unit's available photographs, condition details and relevant inspection information before confirming an order.

## SPECIALISED SHIPPING CONTAINERS

Depending on availability, specialised container enquiries can include open-top containers, flat-rack containers, side-access units, insulated containers, refrigerated containers and smaller container formats.

The right option depends on cargo dimensions, loading method, environmental requirements and handling arrangements.

## REEFER CONTAINERS

Reefer containers are refrigerated shipping containers designed for temperature-controlled cargo applications. They may be considered for suitable storage, distribution, transport and commercial requirements where controlled temperatures are important.

Pearltainer accepts enquiries for reefer containers for purchase and rental. When requesting a quotation, specify:

- Required temperature range and cargo application.
- Unit condition and available refrigeration details.
- Power supply and genset requirements.
- Delivery location, site access and operations.
- Rental period and collection arrangements.

*Temperature performance, operating condition and equipment specifications should be confirmed for the individual unit.*

# Modular Offices, Toilet Cabins and Chiller Containers

---

Beyond marine shipping containers, Pearltainer accepts enquiries for modular units designed for temporary or project-based facilities. Purchase and rental requirements can be discussed for suitable unit types, subject to specifications and availability.

## MODULAR OFFICE CONTAINERS

Modular office units can provide practical workspace for construction sites, industrial facilities, project teams, temporary operations and commercial locations. Requirements may include internal layout, doors, windows, lighting, air conditioning, electrical provisions and other fit-out features. Confirm which features are included in the proposed unit.

## PORTABLE TOILET & SHOWER CABINS

Portable toilet and shower cabins can support construction projects, industrial premises, temporary facilities and events. Planning should account for the number of users, unit configuration, water supply, drainage, waste management, site access and applicable local requirements.

## CHILLER CONTAINERS

Chiller containers can be considered for suitable chilled-storage and temperature-controlled applications. Specify the required temperature range, storage requirements, dimensions, operating location and power supply. The final equipment specification should be confirmed against the intended application.

## OFFSHORE AND INDUSTRIAL CONTAINERS

Offshore and industrial projects may require specialised containers or equipment built for particular handling, operating and environmental conditions.

### DNV Offshore Containers

Where offshore operations require DNV-compliant or certified containers, the applicable standard, certification status, inspection records, lifting arrangements and intended use must be confirmed for the specific unit. Not every industrial or shipping container is DNV-certified.

## STORAGE & MODIFIED CONTAINERS

Shipping containers can provide practical space for tools, materials, equipment, inventory and other suitable storage requirements. Customers may also enquire about modified containers for workshops, site offices, retail spaces and other specialised uses.

Modifications may involve doors, windows, partitions, insulation, ventilation, electrical provisions or internal fit-outs. The final design should account for structural requirements, safety considerations, local regulations and the installation site.

## ACCESSORIES AND SPARE PARTS

Container maintenance and operation can require suitable replacement parts. Enquiries may include door components, locking mechanisms, seals, flooring, refrigeration-related parts and other container hardware, subject to availability.

## Why Enquire with Pearlainer?

Choosing the right container begins with understanding how it will be used. Pearlainer helps customers communicate their requirements so suitable equipment options and quotation details can be reviewed before a purchase or rental decision.

- **Broad range of solutions:** Standard, high-cube, refrigerated, open-top, flat-rack, insulated and specialised.
- **New and used options:** Discuss available equipment according to your budget and application.
- **Purchase and rental:** Explore ownership or rental options for eligible container categories.
- **Project-specific focus:** Explain your dimensions, quantity, operating needs, and delivery location.
- **Logistics coordination:** Request transport information through PearlGlobal UAE.

### INDUSTRIES WE SERVE

- Shipping, freight forwarding & logistics
- Construction & infrastructure projects
- Warehousing, distribution & inventory
- Manufacturing & industrial facilities
- Food distribution & temp-controlled storage
- Retail, commercial & temporary business
- Energy, offshore & specialised industrial

### Types of Offshore and Industrial Containers

Built for Tough Environments. Designed for Safe and Efficient Operations.

#### Offshore Containers

Rugged | Corrosion Resistant | Built for the Ocean

**Standard Offshore Container**  
General purpose storage and transportation on offshore platforms and vessels.

**Open Top Container**  
Ideal for oversized cargo and easy loading from the top (using crane or lifting equipment).

**Flat Rack Container**  
Designed for heavy and oversized cargo with no side walls (for easy loading).

**Tank Container**  
For liquid and chemical cargo with high safety and containment standards.

**Reefer Container**  
Temperature-controlled storage for perishable and sensitive cargo.

**DNV Offshore Container**  
Certified for offshore use with DNV standards for enhanced safety and durability.

#### Industrial Containers

Versatile | Durable | For Every Industry

**Dry Storage Container**  
Most common type for general industrial and commercial goods.

**Open Top Container**  
Suitable for tall or bulky cargo loaded from the top.

**Side Door Container**  
Easy access for loading and unloading from the side.

**Insulated Container**  
Maintains temperature for sensitive goods (non-refrigerated).

**Hazardous Material Container**  
Built for safe storage and transport of dangerous goods.

**Collapsible Container**  
Space-saving design for returnable and multi-trip use.

**Bulk Container**  
For dry bulk materials like grains, powders and granules.

**Ventilated Container**  
Provides airflow for perishable and fresh produce.

**Modular Container**  
Converted for offices, labs, workshops and site accommodation.

### TRANSPORT & LOGISTICS SUPPORT

Through **PearlGlobal UAE**, customers can enquire about suitable logistics and freight services according to the origin, destination, cargo, route and requested scope. Coordinate your equipment and transport requirements in one place.
